

Node-RED web Application

Team ID	PNT2022TMID11760
Project Name	Smart Waste Management System for Metropolitan Cities

OBJECTIVE:

To develop the web Application using Node-RED service. Also display the Bin location on the Node-RED web UI.

STEP 1:

Develop a python code to display the location of the bin along with the bin status.

PYTHON CODE:

```
import wiotp.sdk.device
import time
import random
import requests
import urllib.parse

# The address variable contains the location where the Smart bins are installed.
address= ['Kodambakkam','T.nagar','West mambalam','vadapalani','ekkattuthangal']

myConfig = {
    "identity": {
        "orgId": "dluuhi",
        "typeId": "SWMS",
        "deviceId": "6032"
    },
    "auth": {
        "token": "311519106032"
    }
}

def myCommandCallback(cmd):
    print("Message received from IBM IoT Platform: %s" % cmd.data['command'])
```

```

m=cmd.data['command']

client = wiotp.sdk.device.DeviceClient(config=myConfig,
logHandlers=None) client.connect()

for x in address:

url = 'https://nominatim.openstreetmap.org/search/' + urllib.parse.quote(x) +'?format=json'

response = requests.get(url).json()

a = response[1]["lat"] # a variable contains the latitude of the particular Smart bin b =
response[1]["lon"] # b variable contains the longitude of the particular Smart bin

bin_stat = random.randint(0,100)

In_percent = str(bin_stat)+ "%"

# The above random.randint() function generate the random bin values which are then published to
#the IBM Watson cloud Platform

myData={'Latitude':a, 'Longitude':b, "Bin Status":In_percent}

client.publishEvent(eventId="status", msgFormat="json", data=myData, qos=0, onPublish=None)

print("Published data Successfully: ", myData)

client.commandCallback = myCommandCallback

time.sleep(2)

client.disconnect()

```

OUTPUT:

```

>>>

```

STEP 2:

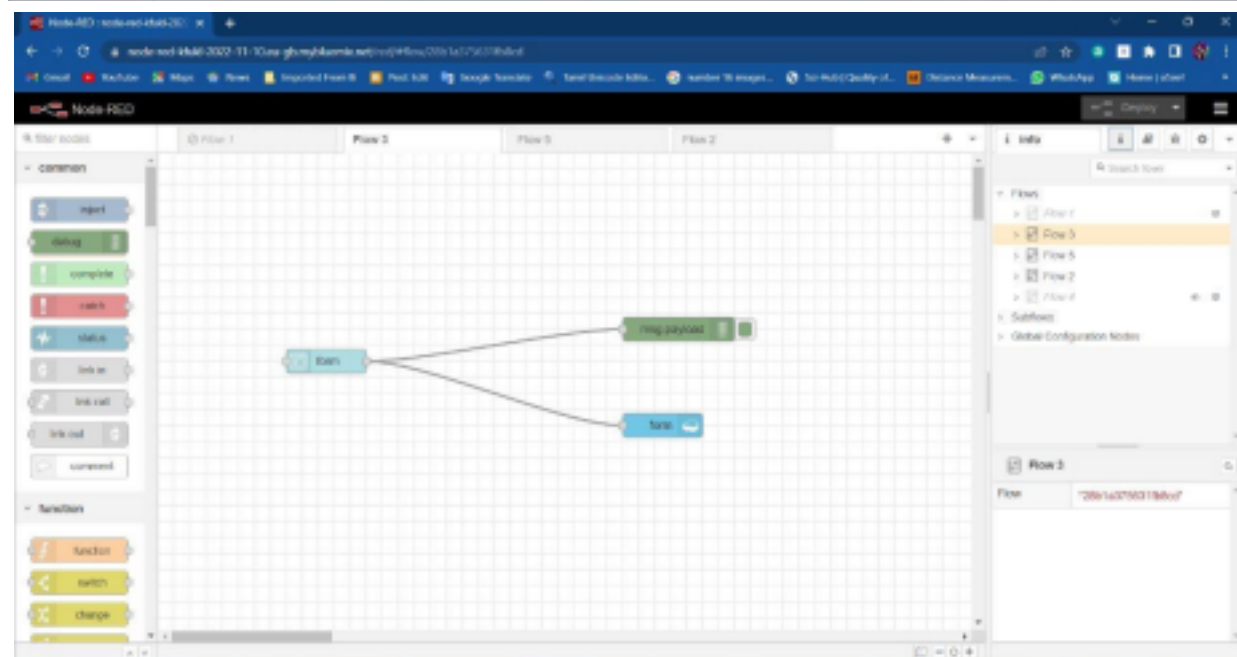

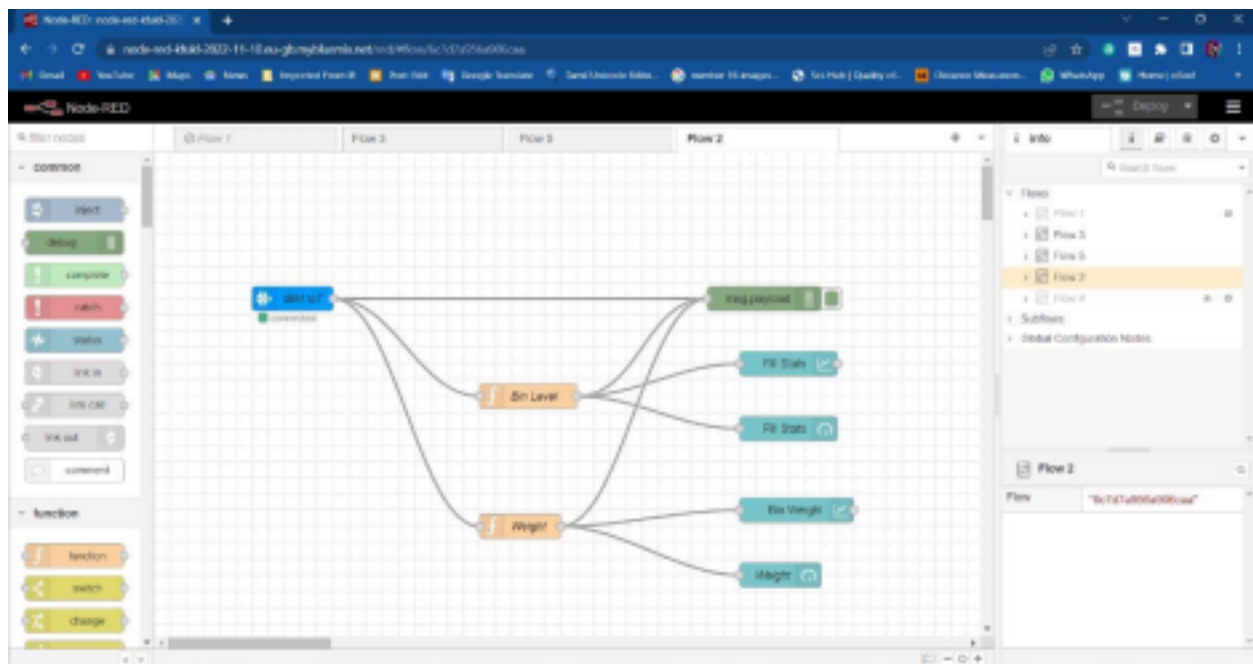

View the output in IBM Watson IoT Cloud Platform.

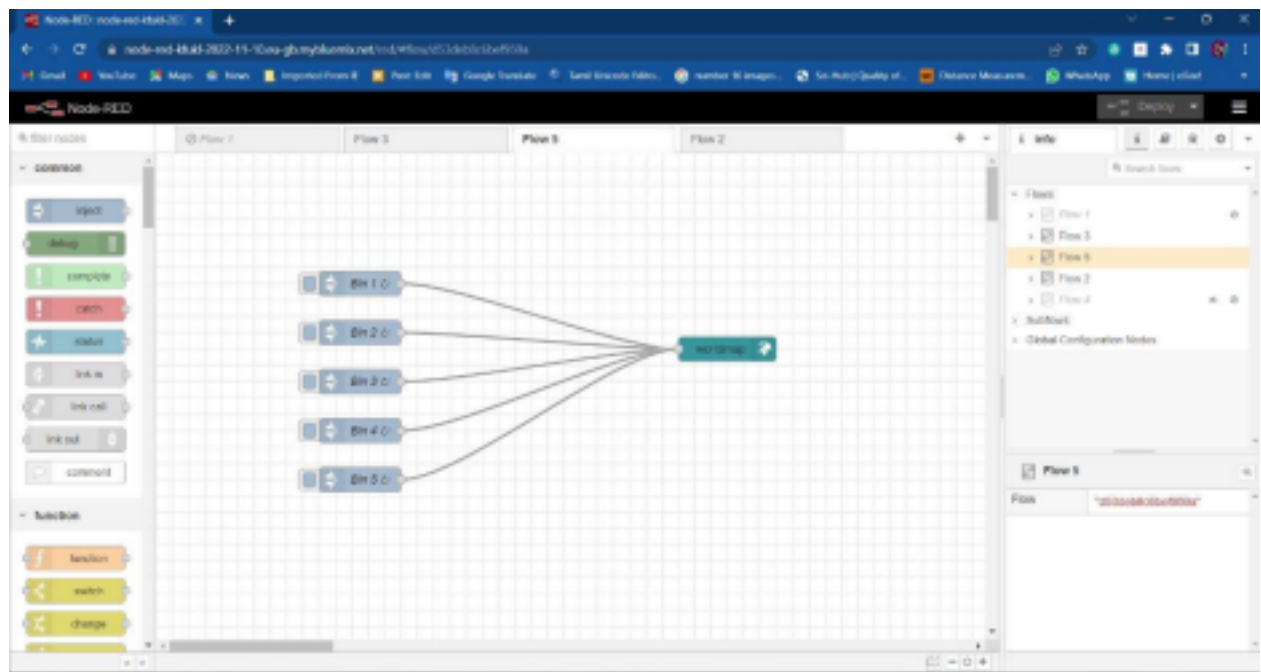

IBM Watson IoT Platform:

STEP 3:

Creating a Node-red UI to view data in graphical form.

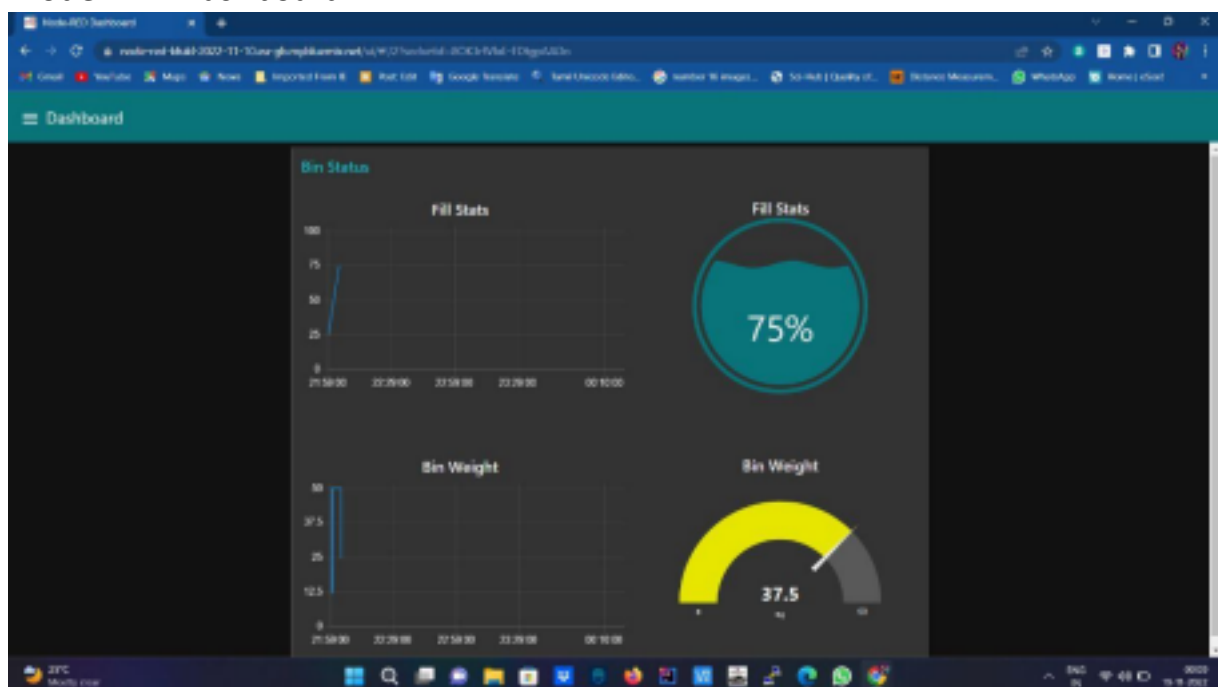

STEP 4:

- Display the location on the Map in Node-RED Web UI
- Send the notification if the bin value crosses the threshold value

Node-RED Dashboard:

NOTE:

The result above indicates that the Fill status is 75% full, meaning that if any further trash is deposited to the smart bin, it will reach its threshold value. The fill status then changes its colour to red.
